This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

No. 1. SERIES 1900-1901.

MONTHLY SUMMARY

OF

COMMERCE OF THE PHILIPPINE ISLANDS.

JULY, 1900.

WITH COMPARATIVE TABLES OF IMPORTS AND EXPORTS, BY ARTICLES AND COUNTRIES.

PREPARED IN

DIVISION OF INSULAR AFFAIRS,

WAR DEPARTMENT.

WASHINGTON:

GOVERNMENT PRINTING OFFICE.

1901.

EXPLANATION OF REGULAR STATISTICAL TABLES.

General imports.—The regular statement of imports of merchandise, by articles and countries, in this publication is what is termed the statement of general imports, embracing imported articles entered for immediate consumption on arrival and articles entered for warehouse.

The term "entry for consumption" is the technical name of the import entry made at the custom-house, and does not imply that the goods have been actually consumed, but simply that they have been delivered into the custody of the importer and that the duties on the dutiable portion have been paid.

The values of articles imported are governed by the regulations in effect May 1, 1899, which prescribe that the values of imported merchandise subject to duty shall be "the actual market value or wholesale price of such merchandise as bought and sold in usual wholesale quantities at the time of exportation in the principal markets of the country from whence imported and in the condition in which such merchandise is there bought for exportation or consigned for sale, including the value of all cartons, cases, crates, boxes, sacks, and coverings of any kind, and all other costs, charges, and expenses incident to placing the merchandise in condition ready for shipment."

Domestic exports.—The regular statement of domestic exports, by articles and countries, in this publication exhibits the exports of domestic products or manufactures, also exports of commodities of foreign origin which have been changed from the form in which they were imported or enhanced in value by further manufacture.

The value of exports of domestic merchandise is their value at the time of exportation in the ports of the island whence they are exported.

Tonnage tables.—In the tables of tonnage movement, the tonnage is stated in net tons of 100 cubic feet carrying space after the prescribed allowances are made for crew space, engine space, etc.

Weights.—In all tables published the ton weight is 2,240 pounds and the hundredweight is 112 pounds, unless indicated otherwise.

Customs districts.—Statements of imports and exports are shown by customs districts, which have a certain prescribed limit of territory with a port of entry.

COMMERCE OF THE PHILIPPINES FOR THE FISCAL YEAR ENDED JUNE 30, 1900.

NOTE.—All figures for years prior to 1898 are taken from Bulletin No. 14, United States Department of Agriculture, Section of Foreign Markets.

Even with the extremely unsettled conditions prevailing in the Philippines, an analysis of the trade statistics shows that the import trade for the fiscal year ended June 30, 1900, was the largest of any year since 1880.

The total value of merchandise, gold and silver imported into the Philippines during the year amounted to $23,039,587, or an average of $1,919,965 per month. The average annual imports into the Philippines from 1880 to 1894, the last year for which official statistics are available, amounted to $17,039,044, showing an increase in favor of the fiscal year 1900, as compared with the annual average given above, of $6,000,543, or 35 per cent. This showing is still more remarkable when compared with the estimated imports for 1895, 1896, and 1897.

According to an estimate based upon data collated by the British consul at Manila, the approximate value of imports into the Philippines for 1895 is stated at $7,915,600, for 1896 at $9,292,500, and for 1897 at $9,120,000. The statistics of trade for the first eight months of 1898 can not be given.

The custom-house at Manila was opened for business by the American military authorities on August 20, 1898, and was the only port open to trade prior to January 1, 1899. A comparison of the imports for the first four months of American military occupation, amounting in value to $5,154,649, with the corresponding four months of 1899 with three ports open and imports amounting in value to $7,862,463, shows an increase in favor of 1899 of $2,707,814, or 52½ per cent.

The average annual imports from the United States for the five years 1887–1891 amounted in value to $130,662, and for the five years 1892–1896 to $135,228, while for the fiscal year ended June 30, 1900, the value of imports direct from the United States amounted to $1,656,469, an average of $138,039 per month and an increase of 1,125 per cent over the annual average of 1892-1896.

The total imports from China and Hongkong for the said fiscal year amounted to $9,970,957—about 80 per cent, or nearly $8,000,000, of this amount having been imported from Hongkong. It is unquestionably the case, as regards the statistics of imports into the islands from the United States, that they do not include a considerable amount of merchandise that is imported indirectly. This is notably true of some of the principal commodities imported from the United States, and particularly so in the case of wheat flour. Large quantities of these articles that are recorded as imports from Hongkong are undoubtedly reexported from that port to the islands. The amount of merchandise that is imported thus is much larger than the direct shipments stated in the official returns.

This statement is sustained by the following extract from a letter received from the collector of customs at Manila, dated March 6, 1900:

> The flour imported into the Philippine Islands comes chiefly from the United States, though Australia and Japan furnish a considerable quantity. During 1899 there was received from the United States direct 10,200 barrels; from the United States via Hongkong 55,322 barrels (total 65,522, valued at $376,871); from Australia 607 barrels, valued at $2,915, and from Japan 304 barrels, valued at $1,624. This embraces all of the flour imported into the Philippine Islands through commercial channels during the year 1899. All of the flour referred to in monthly reports as coming from Hongkong, as a matter of fact come from the United States, but is invoiced from Hongkong, as it is sold by jobbers there to Philippine dealers. During the month of January, 1900, there was received from the United States direct 450 barrels and from the United States via Hongkong 13,120 barrels.
>
> Canned meats for the month of January, 1900, were received as follows: From Hongkong 49,320 pounds, from England 31,668 pounds, from the United States direct 30,000 pounds, from Spain 5,160 pounds, and from Germany 4,270 pounds. From the best information at hand, 30,000 pounds of canned meats from Hongkong came originally from the United States, placing the United States at the head of the list with 60,000 pounds.

From the foregoing statement it will be seen that the value of direct imports from the United States for the fiscal year amounted to $1,656,469, and that the indirect imports of flour during the calendar year amounted to $318,193. These figures do not include the values of mineral oils, meat products, cotton manufactures, and many other commodities that are imported from the United States indirectly, nor do they include any goods imported by the commissary or the quartermaster for the use of the Army.

The following table will show the percentage of increase or decrease in the value of imports into the Philippines from certain countries during the fiscal year ended June 30, 1900, as compared with the annual average value of imports for the years 1892–1896:

Country.	Annual average, 1892–1896.	Fiscal year 1900.	Increase.		Decrease.	
			Amount.	Per cent.	Amount.	Per cent.
	Dollars.	*Dollars.*	*Dollars.*		*Dollars.*	
United States	135,228	a 1,656,469	1,521,241	1,125	.....	.....
United Kingdom	3,105,976	3,941,422	835,446	27	.....	.....

Iron, steel, and manufactures of	365,133	17,092			

a Does not include imports from United States via Hongkong.

EXPORTS.

The total value of exports for the fiscal year amounted to $21,766,440, or an average of $1,813,870 per month. The annual average exports from the Philippines for the years 1880–1894 amounted to $20,526,961, the increase in favor of the fiscal year amounting to $1,239,479, or 6 per cent.

While the value of exports from the Philippines has been maintained, the quantities have materially decreased. This is particularly true in the case of Manila hemp. For example, the total exports of hemp during the fiscal year amounted to 75,476 tons, valued at $11,398,943, or an average of $151.03 per ton, while the quantity exported during 1894 amounted to 94,974 tons, valued at $7,243,842, or an average of $76.27 per ton.

The collector of customs for the islands, in his report to the United States military governor, says:

> The decline is partly accounted for by the disturbed condition of the country, which has interrupted and prevented agricultural and productive development, and partly so far as hemp, the principal article of export heretofore, being held up in the islands, it is believed, by interested parties until it suits their financial convenience to export it.

No doubt the exports will increase rapidly when agricultural and productive development are fully restored in the islands.

MARKET FOR AMERICAN PRODUCTS.

[Extract from the report of the Philippine Commission of November 30, 1900.]

It is a remarkable fact that, in spite of the disturbed condition of the country and the consequent interference with business, there has been a steady and rapid increase in the customs receipts, culminating with the month just past, during which they reached a total of $1,888,837.12, Mexican. This, too, in spite of the numerous drawbacks apart from those occasioned directly by the war. The tariff has been such as to inflict a practically prohibitory duty on some important imports. The number of cascoes and lighters has been inadequate for the prompt

discharge of vessels arriving in port, and the custom-house facilities for the storing of goods have proved insufficient, so that much delay and heavy expense have been caused to importers. The custom-house facilities are being increased as rapidly as possible, and it is believed that they will soon become adequate, while the building of cascoes and lighters is progressing more and more rapidly as time goes by.

The completion of the breakwaters inclosing the new port of Manila and the dredging of the basin thus formed will be a very great advantage to importers in this market. At present vessels are sometimes compelled to lie idle for weeks during the typhoon season, owing to the roughness of the bay. This difficulty will be obviated when the breakwaters are completed and the basin is dredged.

Anything that favors reduction in freights and a consequent lowering of prices at which American goods can be placed on the market here, will greatly increase their use among the common people. It is highly desirable that goods should be shipped directly to Manila. When they are transshipped at Hongkong it is reported that there is considerable loss from careless handling, and freight rates from Hongkong to Manila are exorbitant. Yet many importers are obliged to order their goods sent by this route at present, as the long delays at Manila in unloading make shipowners unwilling to send their vessels here, or lead them to charge very high freight rates in order to compensate themselves for the time lost in port. The commission has already provided for the completion of the work outlined on the new port at the earliest possible time.

The coasting trade of the islands is at present in the hands of a few large companies; in fact, the bulk of it is in the hands of a single concern. Lack of competition enables the owners of vessels engaged in this trade to fix freight rates, which are so high as to interfere considerably with the marketing of imported goods at moderate prices. The coasting trade is extensive and is certain to increase rapidly as order is restored and means of inland communication are improved.

There is at present a strong demand here for light-draft vessels, suitable for entering the smaller ports of the archipelago, and for large steam launches or tugs, and this demand seems likely to continue for some time. The bringing of such vessels here would result in the increased use of imported goods, through the consequent cheaper rates at which they could be placed on the market and at the same time would yield a handsome profit to their owners.

American exporting houses can not be too strongly urged to study carefully the Philippine market and to familiarize themselves with the tastes and prejudices of the people, rather than to ship their goods here haphazard and take chances on their proving acceptable.

It is believed that this country will eventually afford a good market for American agricultural implements and machinery. Agriculture is in its infancy here, and the tools and machinery in use are, for the most part, crude in the extreme. While there are some steam sugar mills in Luzon and Negros, yet the machinery employed is out of date when compared with that in use in the Hawaiian Islands. In very many instances cane is still crushed between stone or wooden rollers turned by draft animals. If sugar can be advantageously grown and marketed with such machinery and methods as are at present employed, it is certain that profits would be enormously increased were thoroughly modern machinery and methods to be introduced.

For the successful cultivation of large sugar estates, steam plows must be employed in considerable numbers. The sugar land is admirably adapted to their use, being for the most part level and free from stones. The water buffalo, which is at present used for plowing, is a very unsatisfactory sort of a draft animal at the best, while the mortality among buffaloes from rinderpest has recently reached 60 to 80 per cent of the total number in many provinces. Other epidemics of rinderpest in the past have produced similar or worse results. In many provinces the people have been unable to plant their crops during the present season through lack of draft animals for plowing, and were steam plows available now, their owners might make handsome profits by breaking up land at a fixed price per acre.

The plows now in common use are wretched affairs and the harrows are little better. Such things as our disk harrows, horse cultivators, etc., are entirely unknown. There are no good hoes to be had in the islands, the implements in common use being more like adzes.

Native planters are already more or less alive to the necessity of portable tramways for bringing cane to their crushers, and some of the more important sugar plantations have them, but there will be need of many more.

The Filipinos are to a considerable extent an imitative people. Were modern implements and sugar machinery of the sort mentioned to be simply placed upon the market and offered for sale here, they would probably not purchase; but were a few modern sugar estates established here, native planters would be quick to appreciate the advantages of improved machinery and implements.

Similarly, the methods employed in planting, cultivating, and harvesting rice are the crudest. The rice is planted and harvested by hand. Most of it is thrashed under the feet of men or animals. The hull is removed by pounding in wooden mortars, and winnowing is usually accomplished by tossing up grain or chaff in flat

wooden baskets and allowing the wind to carry the chaff away. Improvements in the method of harvesting and in the implements used for the purpose is most important, as quantities of rice often spoil in the fields at harvesting time for lack of sufficient labor; while portable thrashing, pearling, and winnowing machinery would speedily find its way into general use. A large steam pearling mill recently established on the line of the Manila and Dagupan Railway proved a very profitable investment.

The amount of drugs and chemicals imported is considerable, and will increase. American exporters will have to compete with the German trade, but they ought to be able to do so successfully. It would seem that there was an especially good opportunity for the importation of manufactured drugs in the form of pills, pellets, etc., which hardly exist in the market to-day.

American horses have done quite well here when fed on imported hay and grain, but mules have done better. There can be no doubt that the mule is the most satisfactory draft animal which has ever been introduced into this country, and is destined to supplant the comparatively weak and slow-moving water buffaloes on large estates.

It is believed that the market for wheat flour will greatly increase with the return of prosperity to these islands and the proposed reduction in the duty on it. The natives like bread when they once become accustomed to it, and the probable shortage of rice during the coming year will lead to the more extended use of flour.

It is considered certain that there will be a heavy increase in importations of American preserved meats and canned fruits and vegetables, although some very good canned fruits are at present imported from Spain. There will be a market for these commodities in provincial towns, where they have been introduced by the troops, and it is confidently anticipated that changes in the tariff law, which will enable the marketing of them at a materially reduced price, will greatly increase their sale.

The people of these islands are very fond of jewelry, which should be somewhat gaudy to suit their taste. The watches at present marketed here have, as a rule, showy cases and dials and wretchedly poor works. It is not uncommon to find a native with a collection of a dozen watches, none of which will go. Good American watches, with suitable dials and cases, ought to supplant the cheap affairs which at present monopolize the market here.

These islands produced cotton in some quantity before the days of the Spanish Government tobacco monopoly, when the cultivation of cotton necessarily fell into neglect. It is now raised in a very small way in some of the northern provinces of Luzon, but tobacco is still the important crop in this region, and the people are slow to abandon an industry which is yielding them steady returns and embark in a new one with which they are not familiar, so that it is hardly likely that there will be much increase in the local cotton crop in the near future. It can be profitably woven into fabrics here, however, on account of the abundance of suitable and cheap labor, and the commission is informed that there are several projects on foot for the establishment of extensive cotton mills in the islands, those interested intending to import American raw cotton.

Cotton cloth is one of the most important imports, and it would seem that there is no good reason why there should not be a good market for American goods. The German cloth at present brought into the islands looks well in the piece, but is very heavily clayed, poorly colored, and of inferior quality. The English cotton fabrics are of better quality, but are also clayed. The new customs tariff will be so adjusted as to place honest goods at a considerable advantage, and American manufactures will thus be favored.

It is particularly important that the tastes of the natives should be studied and met. When cotton goods of a certain kind have once proved acceptable and have come into general use, the call for them is steady and the natives are apt to insist on having the particular quality and pattern with which they are familiar, rather than something else which may be quite as good or even better, so that the difficulty comes in the initial introduction of the goods.

The iron and steel used in the Philippines must be imported for some time to come, for, although there are very extensive deposits of fine iron ore in some of the islands, their development must be preceded by the development of the coal fields.

A number of electric or steam railway lines are projected, and several of them will doubtless be built as soon as concessions can be secured. This will create a market for railway iron and rolling stock.

There should be a good market here for tanned hides and for the manufacture of leather. The leather obtained by tanning the hides of water buffaloes is porous and soon rots in this moist climate; in fact, leather of any sort lasts a comparatively short time. It is chiefly used at present for harness, carriages, and boots and shoes. American boots and shoes are as yet hardly to be had here, but should find a ready sale. The natives are very fond of patent-leather and other showy shoes for state occasions, and although they may not use them enough to wear them out rapidly, the climate makes comparatively short work of them. The tastes of the people should be consulted by our exporters and suitable lasts made, as shoes shaped on American lasts would hardly be

suited to the feet of these people. Many of the shoes at present used are made here by Chinese cobblers. Those that are imported come chiefly from Spain and Germany.

There will be a steadily increasing call for American electric machinery. At present Manila is the only city in the islands which has electric lights, the small plant at Iloilo having been burned. There are no electric railways in the islands, and it seems certain that there will be a great future for them here.

Hand sewing machines are in steady demand. The bulk of the machines imported during the past year have come from Germany. The German machines are cheap, but not good. Cheap and well-made American machines ought to drive them out of the market.

The Filipinos are born musicians, and, under normal conditions, buy a good many pianos. Instruments intended for use in these islands should be so constructed as to resist dampness. Other musical instruments are sold in some number. At present the bulk of them come from Germany.

There are considerable importations of paints and colors, but those in use here are for the most part very poor. The largest shipments received are from Hongkong, so that it is not possible, from the customs returns, to ascertain the countries from which they originally come. Germany and England seem to be the largest direct exporters to this country.

American edged tools are proving very acceptable to the people here, and the market for them is steadily growing.

Petroleum is one of the most important imports. It has been subject to an extremely high tariff, which will be materially reduced in the near future. The Manila representative of the Standard Oil Company states that he will reduce the price of oil by whatever amount may be removed from the existing duties. He expresses the conviction that a reduction of 20 cents per case in the present market price would triple its use here. The steady increase in the price of cocoanut oil makes it cheaper in the end for the natives to sell their cocoanut oil and buy petroleum to light their dwellings and towns. A heavy increase in the importation of petroleum is confidently to be anticipated.

There is a steady demand for butter, cheese, and refrigerated meats, and it is likely to continue.

It is believed that a market might be developed here for California wines. At present the largest importations of wines come from Spain.

Bicycles are being imported in constantly increasing numbers, and the market for them is sure to grow steadily better. European bicycles were introduced about 1890, but were purchased only by wealthy residents, and the total number reached, it is said, was only about 200. Last year American bicycles were introduced, and there are now some 2,000 of them in this city alone. Projected improvements in the roads ought to exert a strong influence on the sale of bicycles. The demand for tires will be disproportionately large, as rubber does not last well in this climate.

At present prices it would seem that American coal might be imported at a fair profit if it were shipped direct. The increase in the coasting trade and in the import and export trade which is confidently to be anticipated, the establishment of factories and sugar mills, the construction of new railways, the establishment of electric-light plants, refrigerating plants, etc., will create a constantly increasing demand for coal. While the coal fields of these islands are extensive, they are as yet undeveloped, and their development will take both time and capital.

15444—No. 1——2

NOTES.

NEW EASTERN LINE, FROM MANILA TO SINGAPORE.

[From the Manila Freedom, September 22, 1900.]

The S. S. *Kelantan*, 609 tons register, which arrived here Tuesday morning from Singapore via Sandakan, is the first boat of the line of steamers which has just been established between Manila and Singapore.

She is under the flag of the North German Lloyd, and belongs to the large fleet of coasting steamers which were recently acquired by this well-known German concern. These coasting boats are under the general management of Messrs. Behu Meyer & Co., Singapore, who have a branch office in this city. The steamers which are to be put on the regular run have not yet been secured. They will chiefly be light-draft boats of about 1,000 to 1,500 tons carrying capacity, able to discharge and load in the Pasig River.

They will be dispatched from Singapore about every seven or ten days, via one Borneo port, either Labaun, Kudat, or Sandakan, and return by the same route. The intention of the owners is to put four steamers on the regular run.

Although the main purpose of the boats will be freight service, they are to have good accommodations for a limited number of first and second class passengers, an item which will be of value to many Manila residents going westward.

On the southerly course which these steamers take they are not exposed to the storms of the China Sea that the boats going from here to Hongkong encounter. Besides a good opportunity to visit Borneo is given.

MANILA HEMP.

[From the Manila Times, October 18, 1900.]

Manila hemp is not hemp at all, but it is the fiber of the bark of a species of plantain tree, its botanical name being *Musa textilis* Nees, and belongs to the familia *Musacea*.

This fiber is produced only in these islands, although no effort has been spared to produce it in Borneo, Java, Sumatra, India, New Guinea, Australia, and Africa, but without success.

Formerly when it was shipped direct to the States it was invoiced as plantain-bark fiber, but during the past forty years it has been called manila hemp.

Its value was early recognized by the American whalers who used to frequent this archipelago over one hundred years ago. Before the days of steam, when the crack American clipper ships ran between Liverpool and New York, the smart appearance of those ships, with their sails of snowy cotton duck and riggings of manila hemp, contrasted very strongly with the British ships with their canvas sails and Russian hemp rigging.

Nothing in the world equals manila hemp for running rigging, as it does not rot nor harden when wet, like Russian hemp, and its lightness and strength as compared to Russian hemp made it a valuable article for standing rigging before the days of wire rigging.

Formerly an American steam cordage plant was located at Santa Mesa, and the huge 12 and 16 inch hawsers for towing up the Hoogli to Calcutta were made here, as well as the famous whale line used by the Pacific whalers, which was shipped to San Francisco and Honolulu. The United States Navy has a rope walk at the Boston yard, and the cordage for the Navy is made there out of manila hemp.

The manufacturing of cordage is a very simple matter, but it requires the services of men who know their business, and they receive high salaries.

The manila-hemp tree requires a peculiar soil and a certain amount of moisture and sunshine Without these three conditions the fiber is valueless; besides the tree has to be cut down at a certain period of its life, otherwise it is useless for hemp purposes.

The natives go into the lates or hemp plantations in gangs, generally of two men, a woman, and a boy. One man fells the trees or "ponos," the woman trims the trunks and the leaves and splits them into the requisite length; the boy carries these slabs to the other man, who with his crude contraption separates the film from the pulp. The hemp is then dried in the sun and sold to the owner of the late. An average day's work for a gang of three persons is about 25 pounds of cleaned hemp. The cleaning of the fiber from the pulp is very severe labor, and a man can only work at it for three days in the week. The earnings are very small, and the life of a hemp cleaner is a short one as a rule. These uneducated natives go into the nearest hemp late, clean up the hemp, and deliver half to the owner as his share, then sell to him the other half as their share.

The owner of a hemp estate has no sinecure. If he starts a new plantation and sets out his ponos he will have the monkeys and wild hogs to contend with, the former pulling them up to see if they are growing, and the latter rooting them up for food. What is left over requires from two to three years to mature, and during this period the late must be kept clean from the rank growth of a tropical jungle in order that the young trees may receive their proper nourishment. Then comes the tussel with the men; and if there is anything a native detests it is clearing a hemp estate from weeds.

Up to the present time no appliance has been invented to cleanse the fiber from the pulp, and it remains to be seen if some "cute Yankee" can get up such a labor-saving machine.

Fully 60 to 75 per cent of the hemp finds its way eventually to the States, where it is in great demand for binder twine for the wheat fields, as well as for the boring of artesian and oil wells, to say nothing of the demand for cordage. The principal competition it encounters as a binder-twine factor is the sisal, grown in Yucatan; but a wheat farmer will readily pay double the price for manila twine in preference to sisal, although the implement company may assure him that the latter is "just as good," but a smart wheat raiser knows better.

When the railroad through Siberia is completed and the rich steppes along the line are converted into wheat fields, a new market may result for manila hemp.

SUMMARY.

COMMERCE OF THE PHILIPPINE ISLANDS.

IMPORTS AND EXPORTS OF MERCHANDISE.

JULY, 1900.

NOTE.—Beginning July 1, 1900, the statistical reports to the Division of Insular Affairs were based upon a new schedule, giving the classification of commodities imported and exported much more in detail than were required by the schedule in effect prior to that date. Owing to this change it is impossible to make comparison by articles and countries in some instances.

GROUPS.	July, 1899.		July, 1900.		Total seven months ended July 31, 1899.		Total seven months ended July 31, 1900.

6.8:901 2

No. 2. SERIES 1900-1901.

MONTHLY SUMMARY

OF

COMMERCE OF THE PHILIPPINE ISLANDS.

AUGUST, 1900.

WITH COMPARATIVE TABLES OF IMPORTS AND EXPORTS, BY ARTICLES AND COUNTRIES.

PREPARED IN
DIVISION OF INSULAR AFFAIRS,
WAR DEPARTMENT.

WASHINGTON:
GOVERNMENT PRINTING OFFICE.
1901.

EXPLANATION OF REGULAR STATISTICAL TABLES.

General imports.—The regular statement of imports of merchandise, by articles and countries, in this publication is what is termed the statement of general imports, embracing imported articles entered for immediate consumption on arrival and articles entered for warehouse.

The term "entry for consumption" is the technical name of the import entry made at the custom-house, and does not imply that the goods have been actually consumed, but simply that they have been delivered into the custody of the importer and that the duties on the dutiable portion have been paid.

The values of articles imported are governed by the regulations in effect May 1, 1899, which prescribe that the values of imported merchandise subject to duty shall be "the actual market value or wholesale price of such merchandise as bought and sold in usual wholesale quantities at the time of exportation in the principal markets of the country from whence imported and in the condition in which such merchandise is there bought for exportation or consigned for sale, including the value of all cartons, cases, crates, boxes, sacks, and coverings of any kind, and all other costs, charges, and expenses incident to placing the merchandise in condition ready for shipment."

Domestic exports.—The regular statement of domestic exports, by articles and countries, in this publication exhibits the exports of domestic products or manufactures, also exports of commodities of foreign origin which have been changed from the form in which they were imported or enhanced in value by further manufacture.

The value of exports of domestic merchandise is their value at the time of exportation in the ports of the island whence they are exported.

Tonnage tables.—In the tables of tonnage movement, the tonnage is stated in net tons of 100 cubic feet carrying space after the prescribed allowances are made for crew space, engine space, etc.

Weights.—In all tables published the ton weight is 2,240 pounds and the hundredweight is 112 pounds, unless indicated otherwise.

Customs districts.—Statements of imports and exports are shown by customs districts, which have a certain prescribed limit of territory with a port of entry.

NOTES.

MINERAL WEALTH AND THE MINING INDUSTRY IN THE PHILIPPINE ISLANDS.

[From the report of the Philippine commission, November 30, 1900.]

It is difficult at the present time to make any accurate general statement as regards the mineral resources of the Philippine Islands. There has never been any mining, properly so called, in this archipelago up to the present time. The mining fields have never been thoroughly prospected, and even where very valuable deposits were known to exist they were worked, if at all, in a haphazard and intermittent fashion.

Present indications are that the near future will bring a great change in the mining industry. According to the chief of the mining bureau, there are now some twelve hundred prospectors and practical miners scattered through the different islands of the archipelago. Of these, probably 90 per cent are Americans. They are, for the most part, men of good character. They are pushing their way into the more inaccessible regions, furnishing their own protection, and doing prospecting of a sort and to an extent never before paralleled in the history of the Philippine Islands. The result is that our knowledge of the mineral resources of the group is rapidly increasing.

When all due allowance is made for prospectors' exaggerations, it is not too much to say that the work thus far done has demonstrated the existence of many valuable mineral fields. The provinces of Benguet, Lepanto, and Bontoc, in particular, form a district of very great richness.

COPPER.

In the province of Lepanto, at Mancayan and Suyoc, there are immense deposits of gray copper and copper sulphide, and running through this ore are veins of gold-bearing quartz, which is more or less disintegrated and in places is extremely rich. This copper ore has been assayed, and the claim is made that it runs on the average 8 per cent copper, while gold is often present in considerable quantities. The deposits are so extensive as to seem almost inexhaustible.

The commission has been unable to verify the statements as to the extent and richness of these copper deposits through its own agents, but the authority for them is such that they are believed to be substantially correct.

As early as 1856–57 two concessions were granted to the Cantabro Philippine Mining Company, and an attempt was made to exploit them and market their products. Rude methods of mining, ruder methods of extracting the metal, and still more rude and primitive methods of transportation, combined with lack of sufficient capital and suitable labor, led to the abandonment of this attempt, and for more than twenty years the property, which in itself is a small claim upon the immense ledge above referred to, has been occupied only to the limited extent required by the Spanish mining laws to prevent the cancellation of the concession. The officer at present in charge of the mining bureau characterizes this deposit as an "undoubted bonanza." The main thing necessary for its exploitation is the opening up of a short line of communication with the coast.

COAL.

Lignites are known to exist in Luzon, Batan (the island, not the province), Mindoro, Masbate, Negros, Cebu, Mindanao, and other islands. Some of the deposits are very extensive. As yet they have been worked at or near the surface. It is, therefore, remarkable that the samples thus far obtained should prove to be as good as is shown by actual analysis. A comparative table follows, giving analyses of Cardiff, Australian, and Wyoming coals, as well as some of the Philippine coals, in order that the latter may be compared with the former. In this table will be found the famous Rock Springs commercial and locomotive coals; the Union Pacific; the Fremont, Elkhorn and Missouri Valley (Chicago and Northwestern Railroad); the Burlington and Missouri in Nebraska (Chicago, Burlington and Quincy Railroad), and the Cambria Coal Mining Company's coke coal—all of them lignites and all of them successful steam coals.

ANALYSIS OF PHILIPPINE COALS, COMPARED WITH CARDIFF, AUSTRALIAN, AND WYOMING COALS.

Name of mine.	Location.	Fixed carbon.	Volatile matter.	Water.	Ash.	Caloric volume.	Calories fixed carbon.	Remarks.
		Per cent.	*Per cent.*	*Per cent.*	*Per cent.*

23. Union Pacific, No. 1	Hanna	38.70	35.25	14.10	11.90			73.95, Union Pacific R. R. locomotive, fuel.

Testimony is unanimous to the fact that the Philippine coals do not clinker nor do they soil the boiler tubes to such extent as do Japanese and Australian coals. Some of them have been given practical tests in steamers engaged in the coasting trade of the archipelago, with very satisfactory results as regards their steam-making properties.

The extensive fields near Bulalacao, in southern Mindoro, are within 4 to 6 miles of a harbor which gives safe anchorage throughout the year and which has water deep enough for the largest ocean-going vessels. Some of the Cebu deposits are also conveniently situated with reference to harbor facilities. It is to be confidently expected that the coals will play a very important part in the future development of the archipelago.

GOLD.

The outlook as to gold mines grows more favorable as the operations of prospectors are extended. Modern gold-mining machinery has never been used in the Philippines. Igorrote miners in the Benguet-Lepanto-Bontoc district discard all rock in which there is not visible a considerable quantity of free gold. Prospectors in this region claim to have located very extensive deposits of low grade, free milling ore, which will yield large and certain returns as soon as concessions can be secured and machinery put in place. Unless the statements of those who have been working in this region are utterly false, it is true that very valuable deposits have been located, and that extensive operations will be undertaken as soon as claims can be granted and machinery placed. At all events, it is certain that the men who have located these deposits have sufficient faith in them to camp on them and wait month after month for the time to come when they can establish their claims.

IRON.

Extensive deposits of high grade iron ore are known to exist, but it would seem that their development must be preceded by the development of the coal fields.

NECESSITY FOR MINING LAWS AND FOR SETTLEMENT OF EXISTING CLAIMS.

There can be no question that it is to the interest of the inhabitants of this archipelago to have its mineral resources developed. It is equally certain that the men who have faced manifold dangers in locating valuable mineral properties and who are ready and anxious to develop them should be given an opportunity to do so at the earliest practicable time.

Although, as has been stated, the character of the prospectors and miners in the archipelago is above the average, the presence of a considerable body of such men, who have found mineral deposits, but are forced to endure a long period of inactivity pending the time when they can establish their claims and begin active operations, is not a desirable factor in the present situation. The reports which are being sent out are of such a character as to make it highly probable that the number of prospectors and miners will be greatly augmented in the near future. It seems, therefore, most important that immediate steps should be taken to make it possible for the Government to establish some tribunal in these islands to grant mining claims.

There is, furthermore, necessity for some tribunal empowered to decide questions arising in regard to Spanish mining grants and so-called "titles," although the word "title" is in this case a misnomer; for, under Spanish law, only concessions were granted, the title being continued in the Crown.

The ownership of the concessionary was limited to a license of indeterminate length, allowing him to extract certain minerals and to dispose of the same and to convey to others his rights by deed. This "title" was at all times subject to eleven general conditions, and failure to comply with any one of them made it possible for the crown to cancel the concession.

Endless questions are arising as to the status of concessions granted by the Spanish Government to which the titles had been perfected or were in process of perfection. For purposes of convenience, claims are here referred to as "first-class claims" where title has been perfected, and as "second-class claims" where title was in process of perfection.

FIRST-CLASS CLAIMS (SPANISH GRANTS RECORDED).

Of such concessions there were recorded and uncanceled upon the records at the time the Philippine Islands were ceded by Spain to the United States no less than 481. These claims were embraced in 152 "expedientes" (or petitions); in other words, there were 152 different mines. They were distributed among the various minerals as follows:

CLASS.	Claims.	Square meters.
Gold	338	19,974,512.25
Coal	116	17,400,000.00
Copper	2	166,849.24
Iron	9	1,137,571.09
Sulphur	3	180,000.00
Marble	4	80,000.00
Petroleum	4	600,000.00
Kaolin	4	80,000.00
Guano	1	20,000.00
Total	481	39,638,932.58

Some of these grants are doubtless invalid because of long abandonment, but the formal entry of cancellation has not been made upon the records.

SECOND-CLASS CLAIMS (INCOMPLETE SPANISH GRANTS).

When the Philippine Islands were ceded to the United States there were proceedings pending in the department of mines for the survey and official demarcation of 113 claims, embracing 10,941,614.71 square meters and contained in 37 petitions and divided among the minerals as follows:

CLASS.	Claims.	Square meters.
Gold	61	3,531,614.71
Coal	49	7,350,000.00
Marble	1	20,000.00
Trachyte	2	40,000.00
Total	113	10,941,614.71

These claims had not yet reached a stage where they could be closed by concession, since, by the terms of the Spanish law, the act of demarcation, based on a definite official survey by a public surveyor, was a condition precedent to the granting of a title and was the only means by which the lands could be segregated from the public domain.

THIRD-CLASS CLAIMS.

There remains a third class of claims, viz, those which it was attempted to establish through the mining bureau at Manila by the filing of petitions there between May 4, 1898, and March 30, 1899. It would appear that there was no warrant of law for the filing of such petitions and that they have no legal value. Nevertheless they number 1,618 and embrace 149,288,134.37 square meters. They are divided among the minerals as follows:

CLASS.	Claims.	Square meters.
Gold	1,006	60,348,134.37
Coal	467	70,050,000.00
Copper	108	15,160,000.00
Iron	16	2,400,000.00
Sulphur	3	450,000.00
Marble	10	200,000.00
Granite	4	80,000.00
Petroleum	4	600,000.00
Total	1,618	149,288,134.37

As already stated, it is of great importance that some tribunal should be established at the earliest possible date by which the legal status of these claims may be determined. In many, if not all, instances the disturbed conditions which have prevailed in the archipelago since 1896 have prevented the owners of claims of the first-class from fulfilling all the conditions precedent to keeping their titles clear. They desire to pay the taxes due on this property, if it be held that they are the rightful owners, on the one hand, and, on the other, they can hardly be compelled to pay them unless their ownership is recognized. They also, and very naturally, desire to prevent others from squatting on their claims. Similarly, those who had begun to perfect titles to mining concessions prior to the change of sovereignty are anxious to learn what their rights are.

The island government is interested in the clearing up of titles to these mining properties on account of the revenues which would result. The owners, or would-be owners, are interested on account of the possible profit to themselves. The people at large are interested on account of the increased opportunities for the employment of labor which would accompany the active development of mineral deposits.

CEREALS IN THE PHILIPPINES.

[From the Annual Report of the Director of the Bureau of the American Republics, 1900.]

The only cereals grown in the Philippine Archipelago are rice and corn. Of these, rice is by far the more important, being the staple food of the native population. A scarcity of rice always brings hardship and suffering to the people. There are several varieties of this product grown on the islands, differing from each other more or less in flavor, color, and size of kernels. The *mismis* is the best-known variety, and the *malagguit* is another species, which is of an unusually glutinous nature, the flour of which is much used in making pastry. By planting a quick and a later maturing variety, two crops may be harvested in one year. The ordinary price of rice in the husk is about 60 and 65 cents per bushel, while that of shelled rice ranges from 90 cents to $1 per bushel.

The annual production of rice in the Philippines averages about 36,000,000 bushels, but this amount is very far below the actual requirements of the population. In order to supply the deficiency it has been customary to obtain the product of other rice-producing countries, the French colony of Cochin China being the principal source of supply. In some years the quantity of rice imported into Manila has exceeded 3,200,000 bushels, worth nearly $2,000,000.

In several provinces of the Philippines, as, for example, in Cayagan and La Isabella, on the island of Luzon, the inhabitants subsist chiefly on Indian corn, which is the only plant cultivated, except tobacco. As a rule, corn is not consumed so largely in other parts of the archipelago, and scarcely any is imported.

SUMMARY.

COMMERCE OF THE PHILIPPINE ISLANDS.

IMPORTS AND EXPORTS OF MERCHANDISE.

[NOTE.—Beginning July 1, 1900, the statistical reports to the Division of Insular Affairs were based upon a new schedule, giving the classification of commodities imported and exported much more in detail than were required by the schedule in effect prior to that date. Owing to this change it is impossible to make comparison by articles and countries in some instances.]
